

Name: Stephen Lokier

Tel: +971 2 5085295, **Fax:** +971 2 5085200

Address: The Petroleum Institute, P.O. Box 2533, Abu Dhabi, United Arab Emirates

Education: BSc (Hons) Geological Sciences, Oxford Brookes, 1996. PhD 'The Miocene Wonosari Formation, Java Indonesia: Volcaniclastic influences on carbonate platform development', Royal Holloway, University of London, 2000

Research areas:

I have a wide range of research interests but am currently focusing on:

1. The effects of siliciclastic and volcaniclastic sediments on carbonate production and deposition in a range of latitudinal, environmental and tectonic settings.
 2. Deposition of mixed carbonate evaporite sequences in sabkha settings – both ancient and modern.
 3. Detailed sequence stratigraphic studies of Mesozoic and Cenozoic outcrops of the United Arab Emirates and their application and correlation to sub-surface reservoir studies.
